ABOUT THIS REPORT

This report aims to provide a quarterly analysis of the utilization and financial data submitted by Oregon's hospitals to the DATABANK program.

DATABANK is a state-mandated monthly hospital data program administered by Apprise Health Insights in collaboration with the Office for Oregon Health Policy and Research (OHPR). Please note that all DATABANK data are self-reported by the hospital and represent a twelve-month calendar year. Accuracy is the responsibility of the reporting hospitals.

Because this report's objective is to provide a complex dive into the data, the graphs and methods will likely change between reports. This forces only the most compelling stories to be exhibited. The determination of which graphs and stories to focus on is evaluated by hospital finance and data experts at Apprise. While reading this, if you would like a different view of the data in any section, please reach out to Apprise and a custom view will be generated for you.

Note: Kaiser Sunnyside and Kaiser Westside hospitals are excluded from this analysis due to the lack of financial data available in DATABANK.

NOTES FOR THIS QUARTER

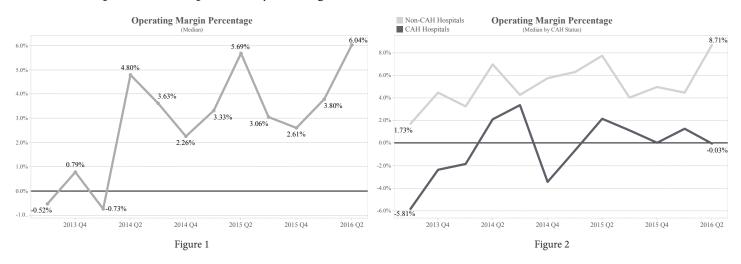

- In the DATABANK reporting system there are four payer categories: Medicaid, Medicare, Self Pay, and Other. Traditionally, the 'Other' category has been reported as 'Commercial' because the largest component of that category is commercial insurance. However, recently Apprise was made aware that the "Other" category includes up to 30% of true other payers–such as worker's compensation and auto insurance. For that reason, we will now be reporting Commercial Payer Mix as Commercial & Other Payer Mix.
- Coquille Valley hospital did not have June 2016 data available at the time of report generation.

TABLE OF CONTENTS

Operating Margin	Page 4
Net Patient Revenue	Page 4
Payer Mix	Page 5
Charity Care	Page 6
Bad Debt	Page 6
Inpatient Discharges	Page 7
Ambulatory Surgery Visits	Page 7
Emergency Department Visits	Page 8
Total Outpatient Visits	Page 8
Appendix A: Regions	Page 9
Appendix B: Hospital Types	Page 10
Appendix C: Definitions	Page 11

OPERATING MARGIN

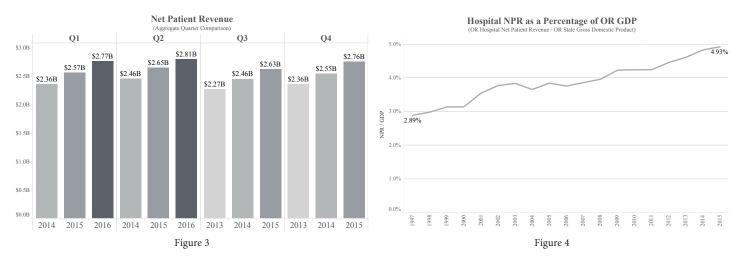

Median Operating Margin percentage (Figure 1) was much higher in Q2 2016 than other quarters, in-line with the previous two Q2's. However, critical access hospitals have had much worse operating margins than non-critical access hospitals over the past three years (Figure 2).

NET PATIENT REVENUE

Aggregate Net Patient Revenue (NPR) continued to increase, controlled for seasonal variation (Figure 3).

Net Patient Revenue as a percentage of Oregon's Gross Domestic Product has increased significantly since 1997. Figure 4 helps to show the increasing impact patient care at hospitals has had on Oregon's economy in the past 18 years. The AHA listed hospital care as 5.6% of the national GDP in 2014.

PAYER MIX

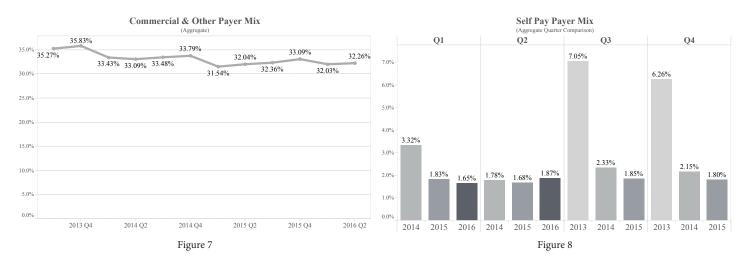

Aggregate Medicaid Payer Mix seems to have stabilized around 22-23% across the state (Figure 5).

Aggregate Medicare Payer Mix has looked extremely stable at 42-43% for the past three years (Figure 6).

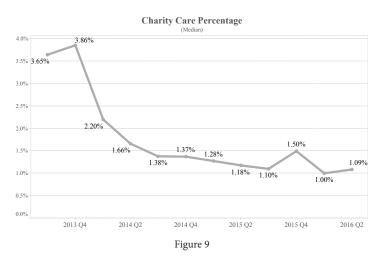

Aggregate Commercial & Other Payer Mix is stabilizing around 32% after a slow decrease through 2014-2015 (Figure 7).

Aggregate Self Pay Payer Mix increased slightly in Q2 2016 for the first time in three years, compared to similar quarters of previous years (Figure 8). This may mean it is starting to stabilize at around 1.6-1.8%.

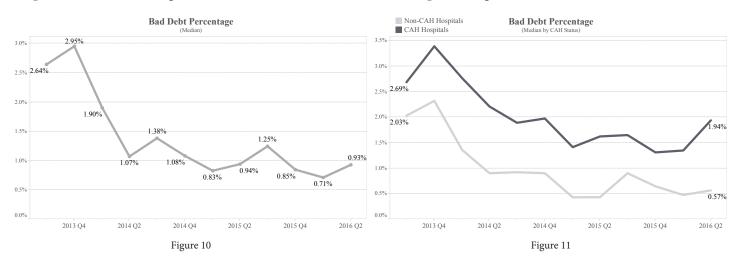

CHARITY CARE PERCENTAGE

Median Charity Care as a percentage of Total Charges seems to be stablizing at around 1% after the ACA drop (Figure 9).

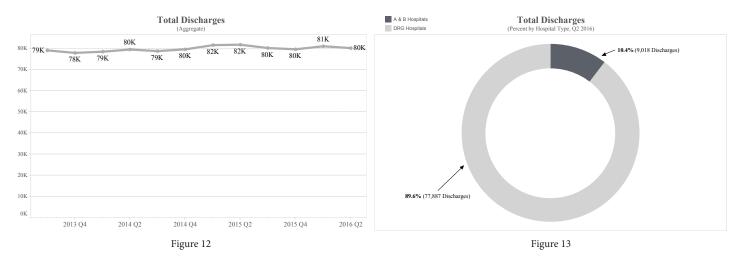

BAD DEBT

Median Bad Debt as a percentage of total charges seems to be stabilizing around 0.7 - 0.9% (Figure 10). CAH hospitals have a much higher rate of bad debt than non-CAH hospitals (Figure 11).

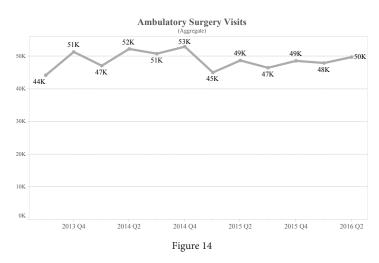

TOTAL DISCHARGES

Aggregate Inpatient Discharges have not trended up or down in the past three years, remaining constant at around 80,000 discharges (Figure 12). Of those discharges, approximately 88% were to DRG hospitals (Figure 13).

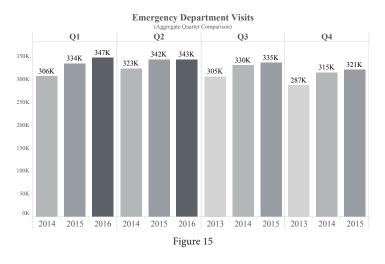

AMBULATORY SURGERY VISITS

Aggregate Ambulatory Surgery Visits appears to be fairly stable over the past three years aside from a drop in Q1 2015 (Figure 14).

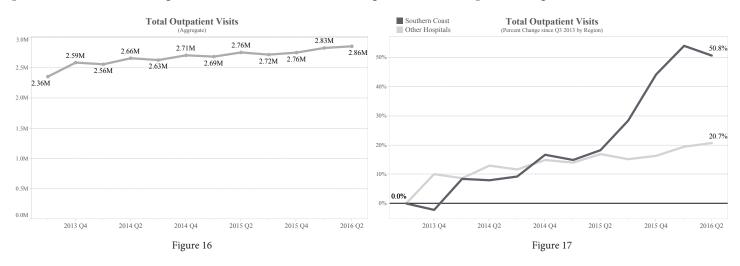

EMERGENCY DEPARTMENT VISITS

Aggregate Emergency Department Visits have continued to increase each quarter compared to previous similar quarters (Figure 15). This increase is ubiquitous across all hospital types, systems and regions.

TOTAL OUTPATIENT VISITS

Aggregate Total Outpatient Visits have increased 21% from Q3 2014 - Q2 2016 (Figure 16). Southern Coast hospitals have shown the highest increase at over 50% during the same time period (Figure 17).

APPENDIX A: REGIONS

Central Oregon: Mid-Columbia Medical Center, Providence Hood River Memorial Hospital, St. Charles Bend, St. Charles Madras, St. Charles Prineville, St. Charles Redmond

Eastern Oregon: Blue Mountain Hospital, CHI St. Anthony Hospital, Good Shepherd Medical Center, Grande Ronde Hospital, Harney District Hospital, Lake District Hospital, Pioneer Memorial Hospital-Heppner, St. Alphonsus Medical Center-Baker City, St. Alphonsus Medical Center-Ontario, Wallowa Memorial Hospital

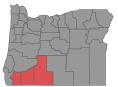

Northwest Oregon: Columbia Memorial Hospital, Providence Newberg Medical Center, Providence Seaside Hospital, Samaritan North Lincoln Hospital, Samaritan Pacific Communities Hospital, Tillamook Regional Medical Center, Willamette Valley Medical Center

Portland Metro Area: Adventist Medical Center, Legacy Emanuel Medical Center, Legacy Good Samaritan Medical Center, Legacy Meridian Park Medical Center, Legacy Mount Hood Medical Center, OHSU, Providence Milwaukie Medical Center, Providence Portland Medical Center, Providence St. Vincent Medical Center, Providence Willamette Falls Medical Center, Shriners Hospital-Portland, Tuality Healthcare

Southern Coast: Bay Area Hospital, Coquille Valley Hospital, Curry General Hospital, Lower Umpqua Hospital, Southern Coos Hospital & Health Center

Southern Oregon: Asante Ashland Community Hospital, Asante Rogue Regional Medical Center, Asante Three Rivers Medical Center, Mercy Medical Center, Providence Medford Medical Center, Sky Lakes Medical Center

Valley: Good Samaritan Regional Medical Center, Legacy Silverton Medical Center, McKenzie-Willamette Medical Center, PeaceHealth Cottage Grove Community Hospital, PeaceHealth Peace Harbor Hospital, Peace-Health Sacred Heart Medical Center at RiverBend, PeaceHealth Sacred Heart Medical Center University District, Salem Hospital, Samaritan Albany General Hospital, Samaritan Lebanon Community Hospital, Santiam Memorial Hospital, West Valley Hospital

APPENDIX B: HOSPITAL TYPES

Urban	Rural	
DRG Hospitals	Type A Hospitals	Type B Hospitals
 Bay Area Hospital Good Samaritan Regional Medical Center Legacy Emanuel Medical Center Legacy Good Samaritan Medical Center Legacy Meridian Park Medical Center Legacy Mount Hood Medical Center McKenzie-Willamette Medical Center 	 Curry General Hospital* Good Shepherd Medical Center* Grande Ronde Hospital* Harney District Hospital* Lake District Hospital* Pioneer Memorial Hospital-Heppner* 	 Asante Ashland Community Hospital Columbia Memorial Hospital* Coquille Valley Hospital* Legacy Silverton Medical Center Lower Umpqua Hospital* Mid-Columbia Medical Center PeaceHealth Cottage Grove Community Hospital* PeaceHealth Peace Harbor Medical Center* Providence Hood River Memorial Hospital* Providence Newberg Medical Center Providence Seaside Hospital* Samaritan Lebanon Community Hospital* Samaritan North Lincoln Hospital* Southern Coos Hospital & Health Center* St. Charles Prineville* St. Charles Redmond West Valley Hospital*

Type A Hospitals are small and remote and have 50 or fewer beds. Type A hospitals are located more than 30 miles from another acute care, inpatient facility.

Type B Hospitals are small and rural and have 50 or fewer beds. Type B Hospitals are located 30 miles or less from another acute care facility

*Designates a CAH facility (more information in Appendix C: Definitions)

APPENDIX C: DEFINITIONS

Bad Debt: Bad debt is the unpaid obligation for care, based on a hospital's full established rates, for patients who are unwilling to pay their bill. Unlike charity care, bad debt arises in situations where the patient has either not requsted financial assistance or does not qualify for financial assistance. In these cases the hospital will generate a bill for services providec. For uninsured patients, the amount of bad debt can pertain to all or any portion of the bill that is not paid. For patients with insurance, certain amounts that are the patient's responsibility—such as deductibles and coinsurance—are expsed as bad debt if not paid.

Charity Care: The dollar amount of free care, based on a hospital's full established rates, provided to patients who are determined by the hospital to be unable to pay their bill. The determination of a patient's ability to pay is based on the hospital's charity care policy. Hospitals will typically determine a patient's inability to pay by examining a variety of factors such as individual and family income, assets, employment status, or availability of alternative sources of funds. Determination of charity care status is made prior to admission if the patient has requested and applied for financial assistance. Charity care status may be granted at a later date depending on the circumstances of the admission, such as an emergency admission, no request for financial assistance prior to admission, or lack of information about the patient's financial status at the time of admission. Financial assistance provided by the hospital may pertain to all or a portion of the patient's bill.

Critical Access Hospitals (CAHs): A designation given to certain rural hospitals by the Centers for Medicare and Medicaid Services. Created by Congress in the 1997 Balanced Budget Act, the CAH designation is designed to reduce the financial vulnerability of rural hospitals and improve access to healthcare in those areas. A CAH must have no more than 25 inpatient beds, maintain an annual average length of stay of less than 96 hours, offer 24/7 emergency care, and be located at least 35 miles away from another hospital.

Emergency Department Visits: The total number of patients seen in the emergency department who are not later admitted as inpatients.

Net Nonoperating Gains: Amount of income or loss after expenses which result from the hospital's peripheral or incidental transactions and from other events stemming from the environment that may be largely beyond the control of the reporting entity and its management. An example would be sale of investments in marketable securities.

Net Patient Revenue: The revenue the reporting entity generates from patient care.

Operating Margin Percent: Measure of profitability from the reporting entity's operations.

Other Operating Revenue: Revenue derived from the reporting entity's operations other than direct patient care. Examples are revenue generated from operation of the cafeteria and gift shop.

Outpatient Surgeries: A planned operation for which the patient is not expected to be admitted to the hospital.

Outpatient Visits: Total number of outpatient visits reported during the reporting period. This includes emergency room visits, ambulatory surgery visits, observation visits, home health visits, and all other visits.

Payer Mix: The amount of total charges that were attributable to one of four payer categories: Medicaid, Medicare, commercial, and self pay.

Reporting Entity: A hospital and any additional consolidated entities that are included in the Income Statement at the front of the audited financial statement. The only exceptions are foundations that the hospital does not want included in its financial reporting.

APPENDIX C: DEFINITIONS (CONT.)

Tax Subsidies: Tax revenues from cities, counties or special hospital districts, which assess levies to subsidize the reporting entity.

Total Charges: Amount billed for services at full established rates.

Total Contractuals: The amount of total charges that have been negotiated away by payers. This is the difference between what the hospital bills for and what it expects to receive as revenue.

Total Discharges: The termination of the granting of lodging in the hospital and the formal release of the patient (includes patients admitted and discharged the same day). When a mother and her newborn are discharged at the same time, they count as one discharge. When the baby stays beyond the mother's discharge (boarder baby), it counts as one discharge for the mother and one discharge for the boarder baby.

Total Margin Percent: Measure of profitability from all sources of the reporting entity's income.

Total Operating Expenses: All expenses incurred from the reporting entity. Examples are salaries and benefits, purchased services, professional fees, supplies, interest expense, depreciation, and amortization and rent and utilities.

Total Operating Revenue: All revenue derived from the reporting entity's operations directly related to patient care. Includes net patient revenue and other operating revenue.

Uncompensated Care: The total amount of health care services, based on full established rates, provided to patients who are either unable or unwilling to pay. Uncompensated care includes both charity care and bad debt.
